

MetaCheck

Metabolic Rate Analysis System

by  KORR™

Give your clients weight loss *SOLUTIONS*
with **Metabolic Rate Testing.**

In the past, accurate measurements of Resting Metabolic Rate (how many calories your client burns at rest) were available exclusively through the use of cumbersome, expensive equipment that was primarily found in hospitals. Today, our equipment provides the same critical data with a simple, 10-minute breath test at a fraction of the cost.

What is it?

MetaCheck is a device that measures the amount of oxygen a person consumes during an 8 to 10-minute resting test. There is a direct correlation between oxygen consumption and caloric burn.

Why test?

The data shows how many calories a person burns at rest. This is key to determining the precise calories necessary to lose or maintain weight.

Who do you test?

Any clients who needs to gain, maintain, or lose weight. In general, people concerned with fitness and weight loss have questions about their metabolism: is it slow? Am I burning calories? MetaCheck provides an answer to those questions!

How do I use the results?

Results can be uploaded to KORR's *Metabolic Meal Plan* app...

- Metabolic Meal Plan allows you to offer clients eating plans designed by Registered Dietitians
 - The app keeps clients accountable, directed and engaged.
- Metabolic Meal Plan app subscriptions are also an additional source of revenue.
